

Waris Rawa

Full-stack engineer with a backend focus

✉ warisrawa145@gmail.com 📍 Sopore, Jammu & Kashmir, India

🌐 linkedin.com/in/waris-rawa-41959a216 🐙 github.com/technolity

Profile

Full-stack engineer with a backend focus - building production-grade SaaS platforms, API orchestration layers, and AI-integrated systems. Hands-on experience architecting multi-tenant services, OAuth integrations, webhook pipelines, and database-backed applications. Shipped complete products solo from architecture to deployment.

EXPERIENCE

Lead Backend Developer, *TedOS Scalez Media AI Marketing Automation SaaS* 2024 – Present

- Sole developer on TedOS, a multi-tenant marketing automation SaaS built on Next.js 14 and Node.js; architected the full backend from data model and database schema design through to third-party API orchestration and Vercel deployment.
- Implemented agency-level OAuth 2.0 integration with the GoHighLevel REST API - sub-account provisioning, permission scoping, token refresh cycles, and custom value mapping - replacing 8-12 hours of manual client onboarding per account.
- Designed a microservice-style pipeline ingesting 20 structured intake fields and triggering 17+ AI asset-generation jobs (sales scripts, email sequences, VSL copy, funnel configs) via Anthropic Claude API with structured JSON output parsing.
- Integrated Supabase (PostgreSQL) with row-level security for multi-org tenancy and Clerk for session management; wrote PLpgSQL migrations for evolving schema requirements.
- Built fail-safe fallback automation flows using n8n and Pabbly for third-party API failures; added structured logging and retry logic to maintain pipeline reliability under concurrent load.
- Wrote Vitest unit and integration tests across API handlers and data transformation utilities covering all critical-path service modules (690+ commits).

Backend & Automation Developer, *Scalez Media Growth & Automation Agency* 2024 – Present

- Developed server-side automation workflows connecting CRM platforms, email providers, and ad networks via REST APIs and webhook event handling.
- Integrated Anthropic Claude and OpenAI APIs into content pipelines; designed prompt templates and output parsers for structured JSON consumed by downstream services.
- Built lead ingestion, deduplication, and data enrichment modules - reducing pipeline errors significantly across multiple client accounts.

Full-Stack Developer (Freelance), *Independent. Web & SaaS Projects* 2023 – 2024

- Delivered client web applications in Next.js, TypeScript, and Tailwind CSS with clean separation of data and UI layers.
- Integrated external REST APIs, implemented async data-fetching patterns, and applied server-side caching strategies for performance-critical routes.

EDUCATION

B.Sc. Computer Science, *University of Kashmir*

08/2024 – 11/2028

Pursuing formal CS fundamentals - algorithms, data structures, OS, DBMS, networking concurrently with active product development and open-source project work.

TECHNICAL SKILLS

Languages

JavaScript TypeScript Python Java C PHP Dart SQL
PLpgSQL Bash

Databases

PostgreSQL MySQL Supabase Redis SQLite NoSQL
patterns Airtable

AI & LLMs

Anthropic Claude API OpenAI API Prompt
engineering Structured output parsing. LLM
orchestration Claude Code CLI

Frontend & Mobile

React 18 Next.js 14 React Native + Expo Tailwind
CSS Framer Motion Redux Toolkit Recharts

Currently Learning

Golang Elasticsearch Cassandra Distributed
systems AWS advanced (RDS, SQS, ECS)

Backend & API

Node.js Next.js API Routes Express.js REST API
design OAuth 2.0 Webhooks. Microservice
patterns Async queues Prisma ORM

Cloud & Infra

AWS (S3, Lambda, EC2) Vercel Render Linux /
Ubuntu Docker (basics). Git/ GitHub

Automation

n8n Make.com GoHighLevel API Pabbly Webhook
event pipelines

Testing & Tooling

Vitest Jest Postman ESLint Cursor AI GitHub Actions

PROJECTS [GITHUB.COM/TECHNOLITY](https://github.com/TECHNOLITY)

ai-marketing-automation,

Stack: Next.js 14, Node.js, Supabase (PostgreSQL + PLpgSQL), Clerk, Anthropic API, GHL API, n8n, Vitest
Production SaaS backend agency OAuth integration AI generation pipelines multi-tenant RLS webhook
orchestration. 690+ commits deployed on Vercel

agriculture-advisory - Cursor Hackathon 2026,

Stack: Node.js + Express, TypeScript, Prisma ORM, PostgreSQL, Redis, React Native + Expo, SQLite
Offline-capable crop disease detection app for smallholder farmers in Kashmir full REST API with
documented endpoints backend + mobile + web architecture sync queue system for offline-to-online data
consistency multilingual (EN / Urdu / Punjabi)

Crypto-Tracker, *Stack: React, JavaScript, CoinGecko API, Recharts*

Real-time cryptocurrency market dashboard live data polling historical price charts persistent watchlist fully
responsive

Amazon Review Intelligence, *Stack: Python, Typescript, Apify*

AI-Powered Amazon Product Review Analysis with Real-time Insights.

AI-powered analytics platform that transforms Amazon product reviews into actionable insights. Built with
modern technologies, it provides sentiment analysis, keyword extraction, emotion detection, and
comprehensive visualizations
