Sopore, Jammu & Kashmir, India | Open to Remote (Global)

SUMMARY

Backend and AI systems engineer with 4 years of experience shipping production software, including 18 months as the sole engineer on a multi-tenant AI SaaS used in live client operations. Deep expertise in LLM pipeline orchestration (17 parallel Anthropic Claude API jobs per session), OAuth 2.0 platform integrations, PostgreSQL multi-tenancy with row-level security, and CRM automation infrastructure. I take products from architecture to deployment without hand-holding, and I have the commit history to prove it.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, PLpgSQL, Go (basic), Bash

Backend: Node.js, Express, FastAPI, REST API design, WebSockets, OAuth 2.0, JWT, webhooks, microservices, async job queues, Prisma, Drizzle ORM

AI / LLM: Anthropic Claude API, OpenAI API, agent workflows, LLM orchestration, RAG pipelines, structured output parsing, prompt systems, fallback and retry design

Databases: PostgreSQL (row-level security, migrations, query optimisation), Supabase, Redis, MySQL, SQLite

Automation / CRM: GoHighLevel API & SaaS mode, n8n (self-hosted), Make.com, Pabbly, Zapier, Apify scraping pipelines

Frontend: Next.js 14, React 18, React Native + Expo, Tailwind CSS, Framer Motion

Infra / Ops: Vercel, Vercel Edge Functions, Docker, AWS (basics), GitHub Actions CI/CD, Vitest, Jest, structured logging & observability

EXPERIENCE

Scalez Media

Lead Backend Developer

Jan 2025 – Present

Remote

- Lead backend engineering and AI integration across the agency's client delivery work: CRM automation, lead ingestion and enrichment pipelines, and Claude/OpenAI content systems producing structured JSON for downstream services.
- Built server-side automation connecting CRMs, email providers, and ad networks; reduced client onboarding and campaign setup from 8–12 hours of manual work to under 15 minutes of supervised execution.
- Own architecture decisions end to end across a TypeScript, Node.js, Supabase, and Vercel stack.

TedOS — AI Marketing Automation SaaS (Client: Ted McGrath Brands, US)

Sole Engineer, flagship client engagement delivered via Scalez Media

Mar 2025 – Present

Remote

- Architected and shipped TedOS solo: a production multi-tenant SaaS where a coach answers 20 intake questions and receives 17 finished marketing assets (funnel copy, email sequences, VSL scripts, ad copy, brand story) generated and pushed live into their GoHighLevel account automatically.
- Designed the orchestration pipeline fanning out 17 parallel Anthropic Claude API jobs per session with typed structured JSON output, per-job retry with exponential backoff, and n8n/Pabbly fallback flows that recover failures without manual intervention.
- Built agency-scale GoHighLevel OAuth 2.0 integration: white-label sub-account provisioning, custom value mapping, permission scoping, token refresh, and snapshot failure recovery.
- Enforced multi-tenant data isolation with PostgreSQL row-level security in Supabase; Clerk sessions; PLpgSQL migrations; Vitest coverage on critical paths. 690+ commits over 18 months on Vercel.

XcendLabs

Founding Engineer

2023 – Present

Remote

- Co-built an AI automation and web development agency; shipped production automation systems for B2B clients across automotive, dental, wellness, and service industries.
- Delivered AI-powered document processing, invoice generation (Make.com, PDF4me), dealership onboarding systems (Airtable, ImgBB), and lead generation pipelines (Apify, Claude API, Supabase) saving clients 10–20+ hours per week.
- Built the agency's site and client-facing products in Next.js with 3D and motion work; own client scoping, architecture, and delivery.

MOON Naturally Yours

Full-Stack & SEO Engineer

2025 – Present

Kashmir, India

- Designed and shipped a mobile-first D2C storefront for a Kashmiri wellness brand solo: catalogue, cart, and WhatsApp-based checkout.
- Delivered measurable traction: 1,200+ orders and 8,000+ customers across India with a 4.9-star average rating; built the full SEO foundation (schema, OpenGraph, canonical metadata, semantic structure) driving organic discovery.

Freelance
Full-Stack Developer

2022 – 2024
Remote

- Designed and shipped production web apps in Next.js, TypeScript, and Tailwind for founders and small teams, owning architecture through deployment.
- Integrated external REST APIs (payments, CRM, content) with resilient async data fetching, SSR, and server-side caching on performance-critical routes.

SELECTED PROJECTS

Amazon Review Intelligence — FastAPI, Next.js 14, Apify, NLP (VADER/TextBlob), Sigma.js. AI review-analytics SaaS: sentiment and theme extraction across 10+ marketplaces, network-graph dashboard, bot detection, multi-format export. Dockerized with CI/CD.

Agricultural Advisory App — Node.js, Express, Prisma, PostgreSQL, React Native + Expo. Offline-first crop disease detection and advisory for smallholder farmers: sync queue, planting guides, market prices, multilingual (English/Urdu/Punjabi). Built at Cursor Hackathon Kashmir 2026.

Crypto Tracker — React, CoinGecko API, Recharts. Real-time market dashboard with live prices, 7-day charts, multi-currency support, search, and watchlists.

EDUCATION

University of Kashmir
B.Tech, Computer Science

2020 – 2024
Kashmir, India

ADDITIONAL

Open Source: Contributor to n8n workflow automation (used self-hosted in production). **Languages:** English, Urdu, Kashmiri, Hindi.
